

Ranu Gupta

Senior Frontend Developer | React, Next.js & TypeScript

the.ranu.gupta@gmail.com | +91-9901969903 | linkedin.com/in/ranu-gupta

PROFESSIONAL SUMMARY

Frontend developer with nine years of experience building scalable, performant web applications with React, Next.js, and TypeScript across the healthcare, fintech, and media sectors. Skilled in component architecture, server-side and static rendering for performance, design-system-driven UI, and REST API integration. Comfortable collaborating with Node.js backend teams to deliver enterprise-grade, accessible interfaces.

TECHNICAL SKILLS

Frameworks & Libraries: React, Next.js (App Router and Pages Router), Redux, Redux Toolkit, React Router, React Hook Form

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

Styling & UI: Tailwind CSS, shadcn/ui, Material-UI, Bootstrap

Rendering & Performance: Server-Side Rendering (SSR), Static Site Generation (SSG), Incremental Static Regeneration (ISR), React Server Components, code splitting, lazy loading, list virtualization, memoization

Data Visualization: D3.js, Chart.js

APIs & Integration: REST APIs, third-party and payment-gateway integration, caching strategies

Testing & Debugging: Jest, Cypress, React Testing Library, React DevTools, Chrome DevTools

Build & CI/CD: Webpack, GitHub Actions, Jenkins, Azure

Backend (working knowledge): Node.js, Express

PROFESSIONAL EXPERIENCE

Cigna | Senior Frontend Developer

Jun 2025 - Feb 2026

React, Next.js, Node.js | Remote

- **Built secure member login and registration workflows** with React, React Router, Redux, and Node.js to support scalable, compliant onboarding.
- Contributed to **Telehealth, Health & Well-Being, and Provider Search** features, integrating React and shadcn/ui with Node.js services.
- Partnered with cross-functional teams to deliver enterprise-grade healthcare applications using React, Redux, and Tailwind CSS.

FIS Global | Software Development Engineer II

Nov 2018 - Apr 2025

React, Next.js, Tailwind CSS | Bengaluru, India

- **Built scalable enterprise web applications** with React, Next.js, and Tailwind CSS, improving maintainability and scalability.
- Reduced page load time by approximately 30% and increased user engagement by approximately 20% through React performance optimization, including memoization, code splitting, and lazy loading.
- Designed efficient REST APIs with backend teams and improved UI responsiveness using React and Next.js (SSR and SSG).
- Integrated third-party APIs and payment gateways using React, Next.js, shadcn/ui, and Tailwind CSS.

Time Inc. | Software Development Engineer I

Mar 2017 - Oct 2018

Angular | Bengaluru, India

- Delivered responsive Angular applications, improving user interaction by approximately 25%.
- Built more than 12 reusable UI components, reducing development time by approximately 30%.
- Worked closely with designers to deliver pixel-perfect UI and UX.

KEY PROJECTS

Cigna HealthCare Internal Member Portal | Cigna

React, Next.js, TypeScript

- **Led frontend development as senior developer** of an internal member portal consolidating Telehealth, Health & Well-Being, and Provider Search into a single React and Next.js application.
- Defined the component architecture and a shared, accessible (WCAG 2.1) design-system library using TypeScript and shadcn/ui, adopted across multiple feature teams.
- Built secure, role-based member dashboards with Redux Toolkit and Next.js server-side rendering, improving first-load performance and meeting healthcare compliance requirements.
- Integrated Node.js REST services for eligibility, claims, and appointment data, applying caching strategies to keep dashboard interactions responsive under load.

Digital Banking & KYC Verification | FIS Global

React, Next.js, Node.js

- Integrated OCR-based document scanning with Google Vision API and Tesseract.js, reducing manual KYC verification time by approximately 70%.
- Built forms with React Hook Form and custom validators, cutting submission errors by approximately 40%.
- Improved page load times by approximately 35% through lazy loading, route guards, and Redux Toolkit state management.

Transaction Monitoring Dashboard | FIS Global

React, Next.js

- Built a real-time monitoring dashboard for more than 50 banks, reducing fraud-detection time by approximately 35%.
- Used Chart.js and D3.js to analyze more than one million daily transactions, surfacing anomalies approximately 50% faster.
- Optimized API calls and caching strategies, reducing load time to under 200 ms.

Time & Travel Magazine Website | Time Inc.

Angular, Material UI

- Built a feature-rich magazine website, increasing engagement by approximately 30%.
- Optimized article rendering and lazy loading, lowering load time by approximately 50%.

EDUCATION

RGPV University | B.E., Electronics & Communications

Aug 2012 - May 2016

Gwalior, India

AWARDS & RECOGNITION

- Recognized for exceptional contributions to frontend architecture.
- Recognized for web performance optimization, reducing load time by 30%.
